

What is TM1Connect?

TM1Connect is a specialized conversion utility that transforms TM1 data into QlikView, Tableau, Business Objects and ODBC compliant applications.

TM1Connect Features:

- Smart Cache
- Data Streaming
- Direct Access to TM1, no importing or exporting data
- Honors TM1 Security
- Convert your data in minutes vs. weeks.
- Scheduled Batch Exports
- Drag & Drop Interface

Connect Tableau, Qlikview, Microstrategy, MS Access and other ODBC compliant applications to TM1 data in real time.

This block contains several screenshots. On the left is a TM1 data grid. In the center is the TM1Connect Manager interface, which features a four-step process: 1. CREATE VIEW (Extract your view from TM1), 2. PUBLISH VIEW (Publish your view to the Webserver), 3. ACQUIRE DATA (Schedule an EXPORT or DIRECT CONNECT to your published views), and 4. VISUALIZE DATA (Import your data file, or use the TM1Connect plugin to visualize your data). On the right are two screenshots of data visualizations: a 3D stacked bar chart and a 2D bar chart showing sales data over time.

TM1Connect Provides:

- The ability to extract all requisite data including attributes, consolidated and/or ruled TM1 data.
- An intelligent multidimensional to relational data conversion engine that accommodates the nuances of unbalanced and ragged hierarchies.
- A drag-and-drop interface that business users can use to:
 - Define the TM1 data to extract
 - Set various extract options
 - Preview your data or before publishing
- Two modes: Direct connect or Batch extract mode.
- Multiple export formats including QVX, CSV, or TXT.
- Extracts up to the minute data from TM1.
- The ability to honor TM1 security.
- Connection to TM1 using ODBC even for hosted TM1 systems.
- Connection to TM1 via ODBC over the internet.
