
Applix *TM1* Technical Bulletin

SAP Patch for TurboIntegrator (282742, 280610)

Date: 1/26/05 Part #: 001-TB-01-02-T-831

In TM1 versions 8.3 and later, TurboIntegrator allows you to import data from SAP BW. TurboIntegrator accesses information through the SAP BW OLE DB for OLAP provider. In order to download information from SAP BW, you must have version 3.5.1.563 of the SAP BW provider installed on the system from which you are running TurboIntegrator.

Currently distributed versions of the SAP GUI include version 3.5.1.409 of the SAP OLE DB for OLAP provider. If you try to download a dimension from SAP BW using this provider, you will receive an error similar to the following:

```
Error: MetaData procedure line (0): Error getting MEMBERS rowset.  
Column restrictions: CUBE_NAME: 0D_SD_C03/CERTIF,  
HIERARCHY_UNIQUE_NAME: [0D_COUNTRY], LEVEL_UNIQUE_NAME:  
[0D_COUNTRY].[LEVEL00] - HRESULT: 80070057, Minor Code: 0, Source:  
MDrmSap.2, Description: Invalid restriction or schema rowset
```

You can retrieve version 3.5.1.563 of the SAP OLE DB for OLAP provider from the SAP web site (<http://www.sap.com>). The SAP bug number that addresses this problem is #744500.

The following table contains information about the supported SAP software revisions.

Component	Supported Revision
SAP BW Gui	6.4.0
SAP BW Provider	3.5.1.563
SAP BW	3.1 patch level 15
